Scopus®

SCOPUS is the largest bibliographic and scientometric database in the field of scientific, medical, and technical research.

Scopus includes over 21,000 scientific journals from more than 5,000 publishers, with a total of over 57 million records.

The new features in Scopus include:

- Addition of nearly 4 million new articles published before 1996.
- Introduction of a new article-level metric.
- Indication of open-access journals in the database.

WEB OF SCIENCE™

Web of Science provides access to a multidisciplinary, abstracting and indexing database covering natural and social sciences.

- A broad citation index.
- Journals with high impact factors in various languages.
- Coverage of conferences annually.

The data is updated weekly, and the interface is periodically improved, approximately four times a year.

Mendeley is a free software for bibliographic management and a social network designed to assist researchers.

Citation management.

- Reading, annotating, and taking notes.
- Importing and organizing documents.

Online Databases
